

Shelby Hall . Jarvis Consulting

I am a BASc graduate from the University of Guelph-Humber with five years of client-facing experience in sales, complemented by a technical foundation in SQL, Python, database design, and data analytics. My previous work experience, where I acted as the main point of contact between the organization and its clients, helped me build a stronger passion for client-facing roles. Additionally, my academic background instilled a naturally investigative approach to problem-solving which is a mindset that ties closely into the diagnostic, requirements-driven nature of business analysis. As someone who thrives on growth and challenge, that's exactly what I'm seeking in this next step of my career.

Skills

Proficient: RDBMS/SQL, Data Modelling, CRM record-keeping, Agile/Scrum, Stakeholder Communication

Competent: Python, Docker, Jupyter, Power BI, Git

Familiar: Databricks, Linux/Bash, PySpark, Account Management, Cloud Computing

Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_eng_ShelbyHall

Linux Cluster Monitoring Agent [GitHub]: During this project, I developed a Linux Cluster Monitoring Agent installed across cluster nodes using Bash to collect hardware specifications and real-time resource usage data, storing it in a centralized PostgreSQL database, provisioned via Docker, for historical analysis. The primary purpose is to proactively identify underperforming servers and detect node failures before they impact production workloads, giving backend developers and operations teams clear, ongoing visibility into cluster health.

Python Data Analytics [GitHub]: I designed and built a lightweight, reproducible analytics environment using Docker to provision two containers: a PostgreSQL data warehouse to store sanitized transaction records, and a Jupyter Notebook environment (Python, Pandas, NumPy, Matplotlib, Seaborn, SQLAlchemy) to query and analyze the data directly, with both containers communicating over a shared Docker bridge network. I analyzed two years of transaction history to uncover trends in order volume, seasonality, cancellations, and customer spend, and performed RFM (Recency, Frequency, Monetary) segmentation to identify distinct customer groups. I concluded the project by presenting my findings and recommendations to stakeholders, walking through the key trends uncovered in the data and the marketing actions each one supported.

Monthly Reporting Dashboard [GitHub]: I acted as the primary liaison between business stakeholders and the technical development team to replace an error-prone monthly reporting process at RBC GAM. My role centred on requirements gathering by meeting with stakeholders across the organization and translating their needs into clear, actionable requirements, and ensuring the dashboard genuinely solved the problems it was meant to address. Throughout the project, I maintained ongoing communication and validated that in-progress work matched stakeholder expectations. Once the dashboard was built, I prepared and delivered a presentation to stakeholders summarizing the solution, its capabilities, and the value it provided in reducing manual reporting effort and giving teams real-time visibility into resource allocation.

Highlighted Projects

B2B Membership Growth & Sales Tracking Initiative [GitHub]: I have collaborated in creating a structured outreach and tracking initiative to drive Costco Business Executive Membership sign-ups across 50+ external organizations and hundreds of employees in the Peel Region. This was designed to maintain a centralized tracking system to monitor all outreach activities, sales interactions, and membership conversion outcomes, enabling data-driven decisions to optimize campaign performance. The database was built using Excel to track 50+ target companies, logging contact details, outreach history, and follow-up schedules. With that being said, I coordinated multi-touch sales and marketing activities, such as in-person visits, email campaigns, and event outreaches across manufacturing, retail, and services sectors. With this program, I delivered weekly progress reports to the sales team, refining targeting strategy based on conversion trends.

Professional Experiences

Business Systems Analyst, Jarvis Consulting Group (2026-present): During my employment, I've worked on projects spanning the full software development lifecycle. My core focus has been gathering business requirements, translating them into clear specifications that development teams can act on, and validating that delivered solutions align with what stakeholders need. I've supported this with a working knowledge of the underlying data, including relational schemas,

SQL reporting queries, and analytics workflows, giving me enough technical fluency to understand feasibility, ask the right questions, and bridge conversations between business and technical teams. I've also presented completed solutions back to stakeholders, communicating value and impact in business terms. This blend of requirements-driven thinking and technical grounding has strengthened both my analytical range and my ability to lead cross-functional communication.

Sales and Marketing Agent, Costco Wholesale (2021-2026): I drove high-ticket product sales across the Peel Region, achieving a 96% success rate through strategic client engagement and tailored pitch positioning. I partnered with the marketing team to develop and execute regional campaigns that grew brand awareness and deepened customer relationships. To achieve the target goals, I collaborated with my team to plan and lead promotional events across multiple locations, acting as the face of the brand and primary liaison between the company and its clients. In the background, when not communicating with clients directly, I managed client accounts using CRM software to track interactions, retention, and account history, maintaining accurate financial record-keeping while consistently exceeding revenue targets.

Education

University of Guelph (2020-2024), Bachelor of Applied Sciences, Justice Studies - Graduated with distinction - Academic Excellence Scholarship - GPA: 3.7/4.0

Humber Institute of Technology & Advanced Learning (2020-2024), Police Foundations, Social & Community Services - Academic Excellence Scholarship

Miscellaneous

- Travelling: I've travelled to 18 countries, in 4 different continents. I enjoy learning new cultures and integrating into the local lifestyle.
- Tennis: Took tennis lessons for four years. Now I tend to visit courts as a pastime.
- Chess: I occasionally played competitively in the Ontario Youth Chess Championship (OYCC), where the highest I've won was fourth place against hundreds of competitors. Now I play for fun with my dad.
