

Shelby Hall . Jarvis Consulting

I am a BAsC graduate from the University of Guelph-Humber with 4+ years of client-facing experience in sales and marketing, and a growing technical foundation built through real-world projects spanning database design, infrastructure monitoring, and process improvement. I bring a detail-oriented, analytical mindset developed through a 3.7 GPA academic record. I now apply this to understanding how to translate stakeholder needs into clear, actionable insights. What excites me about the software industry is that it sits at the centre of solving modern problems. My previous professional background taught me how to identify people's needs and find the best way to deliver them. I've come to realize that translates well into thinking about how systems should be built and why, which is what great software does at scale. There's always something new to learn, a better approach to discover, or a more elegant solution to find, and as someone who thrives on growth and challenge, that's what I'm seeking.

Skills

Proficient: RDBMS/SQL, Python, Data Modelling, Agile/Scrum, Pandas & Numpy, Git

Competent: Stakeholder Communication, Docker, Jupyter, Cloud Computing, PowerBI

Familiar: Databricks, Linux/Bash, PySpark, Account Management, CRM record-keeping

Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_eng_ShelbyHall

Linux Cluster Monitoring Agent [GitHub]: During this project, I developed a Linux Cluster Monitoring Agent installed across cluster nodes to collect hardware specifications and real-time resource usage data, storing it in a centralized PostgreSQL database for historical analysis. The primary purpose is to proactively identify underperforming servers and detect node failures before they impact production workloads, giving backend developers and operations teams clear, ongoing visibility into cluster health. The monitoring agent was built using Bash for data collection, Docker to provision a PostgreSQL instance, and crontab for automated periodic data collections.

Core Java Apps [GitHub]:

- Twitter App: Curabitur laoreet tristique leo, eget suscipit nisi. Sed in sodales ex. Maecenas vitae tincidunt dui, et eleifend quam.
- JDBC App: Curabitur laoreet tristique leo, eget suscipit nisi. Sed in sodales ex. Maecenas vitae tincidunt dui, et eleifend quam.
- Grep App: Curabitur laoreet tristique leo, eget suscipit nisi. Sed in sodales ex. Maecenas vitae tincidunt dui, et eleifend quam.

Highlighted Projects

B2B Membership Growth & Sales Tracking Initiative [GitHub]: I have collaborated in creating a structured outreach and tracking initiative to drive Costco Business Executive Membership sign-ups across 50+ external organizations and hundreds of employees in the Peel Region. This was designed to maintain a centralized tracking system to monitor all outreach activities, sales interactions, and membership conversion outcomes, enabling data-driven decisions to optimize campaign performance. The database was built using Excel to track 50+ target companies, logging contact details, outreach history, and follow-up schedules. With that being said, I coordinated multi-touch sales and marketing activities, such as in-person visits, email campaigns, and event outreaches across manufacturing, retail, and services sectors. With this program, I delivered weekly progress reports to the sales team, refining targeting strategy based on conversion trends.

Professional Experiences

Business Systems Analyst, Jarvis Consulting Group (2026-present): Contributed to full-stack software and data engineering work across the SDLC, from system design and backend development to data pipelines and cloud deployment. I've collaborated in creating production-grade solutions using Python and SQL for data analytics and Spark for big data processing. In addition, I've worked with Linux, Docker, and Git in a DevOps environment. The projects relied on collaboration in cross-functional teams to deliver technical solutions while strengthening leadership and client communication skills.

Sales and Marketing Agent, Costco Wholesale (2021-2026): I drove high-ticket product sales across the Peel Region, achieving a 96% success rate through strategic client engagement and tailored pitch positioning. I partnered

with the marketing team to develop and execute regional campaigns that grew brand awareness and deepened customer relationships. in order to acheive the target goals, I collaborated with my team to plan and lead promotional events across multiple locations, acting as the face of the brand and primary liaison between the company and its clients. In the background, when not communicating with the clients directly, I would also be tasked with managing client accounts with a focus on retention, accurate financial record-keeping, and consistently exceeding revenue targets.

Education

University of Guelph (2020-2024), Bachelor of Applied Sciences, Jusitce Studies - Graduated with distinction - Academic Excellence Scholarship - GPA: 3.7/4.0

Humber Institute of Technology & Advanced Learning (2020-2024), Police Foundations, Social & Community Services - Academic Excellence Scholarship

Miscellaneous

- Travelling: I've travelled to 18 countries, in 4 different continents. I enjoy learning new cultures and integrating into the local lifestyle.
- Tennis: Took tennis lessons for four years as a youth. Now I tend to visit courts as a passtime.
- Chess: I used to play competitively as a youth, where the highest I've won was fourth place in a championship with hundreds of competitors. Now I play for fun with my dad.
